R - EXERCISE OVERVIEW

Week 1

- ***01 – Getting started with R***

  No exercise.

- ***02 – Understanding and using code notebooks***

  1. Launch RStudio and create a new R Notebook (Hint: Go to the following menu: File → New File → R Notebook). Alternatively, you can also try to create a Quarto Document instead of a R Notebook (For details on the differences see here: https://quarto.org/docs/faq/rmarkdown.html).
  2. Do the following steps:
     a. Add a new R code section (Hint: go to the following menu: Code → Insert Chunk).
     b. Next, add a simple formula (e.g., 1+1) at the bottom of the notebook
     c. Run the code chunk.
  3. Store your notebook with a meaningful name.
  4. Preview your notebook (Hint: go to Preview and preview notebook).

- ***03 – Filing your notebook with code and text***

  1. Re-create the following R Notebook. In this notebook, please include (1) a list, (2) a LaTeX formula, (3) an R code cell, and (4) a link.

- ***04 – Advanced features of code notebooks***

  No exercise.

- ***05 – Working with a local code editor***

  No exercise.

- ***06 – Installing and using R packages***

  1. Install and load the `data.table` package (use RStudio's code editor).
  2. Find and use an R command to list all installed packages (use RStudio's code editor).
  3. Have a look at the help file for the R command `library()`. What are optional arguments when loading a package?
